

SUMMIT

INDUSTRIAL FLOORING

POLISHED CONCRETE

“ Summit provided a highly durable floor that met safety standards for slips and falls and took the punishment from forklift traffic. After over a year, we are still pleased with the results.”

– Lawrence M. Leny
Wright Patterson Air Force Base

The team at Summit Industrial Flooring has been perfecting the art of concrete polishing for more than 20 years. We have enhanced floors with company logos, custom colors and artwork. The polishing process makes concrete more dense, which helps protect against absorption of oils and other contaminants and requires less maintenance. Polished concrete is durable, non-toxic, environmentally friendly and a great choice for most retail, commercial and industrial facilities.

Our expert technicians know how to properly prepare and repair concrete for polishing...a critical step to success that must not be overlooked! Just because a flooring company owns a grinder and gives you a low price, doesn't mean you will get the polished floor you are paying for. We own state-of-the-art equipment and require our floor technicians to complete formalized training programs to ensure the job is done right the first time. Summit Industrial Flooring doesn't cut corners and we guarantee our work, which is why a Summit installed floor is a smart floor.

Benefits of Polished Concrete:

- Resists tire marking from forklifts and other traffic
- Significantly more abrasion resistant than unpolished concrete
 - Realize a 30% increase in light reflection as compared to unpolished concrete
- Meets and exceeds OSHA and ADA recommendations for Static Coefficient of Friction (SCOF)
- No VOC's
- No coatings or waxes are ever required
- Lower maintenance cost per year than any other flooring application
- Requires no cure schedule, so less downtime
- Minimizes moisture vapor issues
- Customizable by adding color, logos and artwork

SUMMIT

INDUSTRIAL FLOORING

“After several years of working with Summit, we can say that they have professional installation crews and our end product is always high quality. The result is that our facility is compliant, clean, and attractive to our employees and visitors.”
